### AMENDMENT TO THE CLAIMS

Please add or amend the claims to read as follows, and cancel without prejudice or disclaimer to resubmission in a divisional or continuation application claims indicated as cancelled:

1. (Currently amended) A method comprising:  
determining a location of a client ~~by determining a direction of a source~~ based on a location fingerprint of a signal received from said client; and  
determining whether to grant said client access to a wireless local area network based on said location.

Claims 2-6 (Cancelled)

7. (Currently amended) A method as in claim 1, comprising:  
using a location fingerprint based on multipath characteristics to determine said location of said client.

Claims 8-10. (Cancelled)

11. (Previously presented) A method as in claim 1, comprising:  
defining a boundary of a permitted area; and  
recording instances of attempts to gain access to said wireless local area network from outside said boundary.

12-13. (Cancelled)

14. (Previously presented) A method as in claim 1, comprising accepting signals from a signal receiver of a signal receiver pair wherein a first receiver of said signal receiver

pair is to determine a location of a client relative to a permitted area, and a second receiver of said signal receiver pair is to transmit data to said client.

15. (Currently amended). A system comprising:

first and second signal receivers; and  
a processor to withhold access of a client to a wireless local area network if said client is outside of a permitted area,  
wherein said first signal receiver is to determine a location of said client relative to said permitted area using a location fingerprint, and said second signal receiver is to transmit data to said client.

16-17. (Cancelled)

18. (Previously presented) A system as in claim 15, wherein said second receiver is an access point, and wherein said first receiver includes a wireless component whose location is known.

19-22. (Cancelled)

23. (Previously presented) A system as in claim 15, wherein said first and second signal receivers are signal receivers of a signal receiver pair.

24-30. (Cancelled)

31. (Previously presented) The method as in claim 11, comprising excluding said client from access to said network if a known identity of said client corresponds to one or more of said instances of attempts to gain access to said network.

32. (Currently amended) A method comprising:

receiving location data of a client at an authentication system of a local area network based on a location fingerprint; and

determining whether to grant said client access to a wireless local area network based on said location signal.

33. (Previously presented) The method as in claim 32, comprising:
  - defining a boundary of a permitted area; and
  - recording instances of an attempt to gain access to said wireless local area network from outside said boundary.
34. (Previously presented) The method as in claim 33, comprising excluding said client from access to said network based on a known identity of said client from said recorded instance of an attempt to gain access to said wireless local area network
